

Invited Talk

Irene Li

Assistant Professor

Research interests include machine learning, natural language processing and methods in clinical applications

University of Tokyo , Japan

Abstract:

Large language models (LLMs) have demonstrated exceptional capabilities in text generation tasks. However, they often face challenges such as hallucinations and low factual accuracy. These issues are particularly problematic in domains where precise and reliable information is critical. In this talk, I will present our recent work focused on scientific and medical data, highlighting innovative approaches to enhancing LLMs. Additionally, we will explore the potential of leveraging LLMs to create knowledge graphs and how such systems may assist in various domains. I will also share some preliminary results and intriguing findings.

특강주제: Enhancing Domain-Specific Large Language Models with Knowledge Graphs

일 시: 2025. 01. 17(금), 오후 4시

장 소: 고려대학교 우정정보관 B102호
